

Dismissing the idea that "a bag is a bag", Committed AG takes steps to ensure that each bag is made to withstand our tough North American winters. Quality controlled and manufactured to exceed our customers' needs, the Committed AG Silage Bag works hard to protect your investment.

SiloBags offer a very cost-effective and safe method for temporary storage of grain. Compared to storage in metal silos, grain bagging is a more flexible, more economic and easy to implement solution.

SiloBags are made of strong polyethylene offering outstanding mechanical strength. They are UV stabilized with proven additives. The outer side of the bags is white in order to reflect solar radiation and prevent over-heating of the stored product, while the inner side is black offering complete opacity and keeping the contents in a cool and dark environment. SiloBags are manufactured in a variety of sizes. The thickness of the film varies according to diameter and application. They are packed in boxes including tying rope, ruler for measuring the stretch and repair tape.

quality

Available up
to 10 mil
thickness

TECHNICAL INFORMATION

SIZES - diameter

8'	9'	10'	12'	14'
----	----	-----	-----	-----

LENGTH

Up to 500'	8.5 mil up to 10 mil
------------	----------------------

Benefits

- Full UV stabilised for long-lasting performance
- Up to 10 mil thickness for strength and durability
- High puncture and tear resistance
- Storage options of 220 up to 488 tonne's
- Holds any grain or fodder type
- Low-cost storage system, reducing transport costs
- 12 Month guarantee against UV degradation
